

**NAME**

Encode::EBCDIC - EBCDIC Encodings

**SYNOPSIS**

```
    use Encode qw/encode decode/;
    $posix_bc = encode("posix-bc", $utf8); # loads Encode::EBCDIC
implicitly
    $utf8 = decode("", $posix_bc);         # ditto
```

**ABSTRACT**

This module implements various EBCDIC-Based encodings. Encodings supported are as follows.

| Canonical | Alias | Description |
|-----------|-------|-------------|
|-----------|-------|-------------|

|          |  |  |
|----------|--|--|
| cp37     |  |  |
| cp500    |  |  |
| cp875    |  |  |
| cp1026   |  |  |
| cp1047   |  |  |
| posix-bc |  |  |

**DESCRIPTION**

To find how to use this module in detail, see *Encode*.
