

**NAME**

Pod::Perldoc::ToXml - let Perldoc render Pod as XML

**SYNOPSIS**

```
perldoc -o xml -d out.xml Some::Modulename
```

**DESCRIPTION**

This is a "plug-in" class that allows Perldoc to use Pod::Simple::XMLOutputStream as a formatter class.

This is actually a Pod::Simple::XMLOutputStream subclass, and inherits all its options.

You have to have installed Pod::Simple::XMLOutputStream (from the Pod::Simple dist), or this class won't work.

**SEE ALSO**

*Pod::Simple::XMLOutputStream, Pod::Simple, Pod::Perldoc*
