

**NAME**

TAP::Base - Base class that provides common functionality to *TAP::Parser* and *TAP::Harness*

**VERSION**

Version 3.38

**SYNOPSIS**

```
package TAP::Whatever;

use base 'TAP::Base';

# ... later ...

my $thing = TAP::Whatever->new();

$thing->callback( event => sub {
    # do something interesting
} );
```

**DESCRIPTION**

TAP::Base provides callback management.

**METHODS****Class Methods****callback**

Install a callback for a named event.

**get\_time**

Return the current time using Time::HiRes if available.

**time\_is\_hires**

Return true if the time returned by get\_time is high resolution (i.e. if Time::HiRes is available).

**get\_times**

Return array reference of the four-element list of CPU seconds, as with *"times"* in *perlfunc*.
