NAME

TAP::Parser::Iterator::Array - Iterator for array-based TAP sources

VERSION

Version 3.38

SYNOPSIS

```
use TAP::Parser::Iterator::Array;
my @data = ('foo', 'bar', baz');
my $it   = TAP::Parser::Iterator::Array->new(\@data);
my $line = $it->next;
```

DESCRIPTION

This is a simple iterator wrapper for arrays of scalar content, used by *TAP::Parser*. Unless you're writing a plugin or subclassing, you probably won't need to use this module directly.

METHODS

Class Methods

new

Create an iterator. Takes one argument: an `$array_ref`

Instance Methods

next

Iterate through it, of course.

next_raw

Iterate raw input without applying any fixes for quirky input syntax.

wait

Get the wait status for this iterator. For an array iterator this will always be zero.

exit

Get the exit status for this iterator. For an array iterator this will always be zero.

ATTRIBUTION

Originally ripped off from *Test::Harness*.
