NAME

TAP::Parser::Scheduler::Spinner - A no-op job.

VERSION

Version 3.38

SYNOPSIS

```
use TAP::Parser::Scheduler::Spinner;
```

DESCRIPTION

A no-op job. Returned by `TAP::Parser::Scheduler` as an instruction to the harness to spin (keep executing tests) while the scheduler can't return a real job.

METHODS

Class Methods

new

```
my $job = TAP::Parser::Scheduler::Spinner->new;
```

Ignores any arguments and returns a new `TAP::Parser::Scheduler::Spinner` object.

Instance Methods

is_spinner

Returns true indicating that is a 'spinner' job. Spinners are returned when the scheduler still has pending jobs but can't (because of locking) return one right now.
